

Life (IC-33) & General (IC-34) Insurance Module

Description:

Life insurance is a legal contract between the insurer and the insured, in exchange for your premium payment, generally known as the consideration, it's a contract between the policyholder and the insurance company, where the life insurance company pays a specific sum to the insured individual's family upon his death. Whereas general insurance covers hazards that aren't life-threatening. The different forms of general insurance are fire, marine, motor, accident and other miscellaneous non-life insurance. The tangible assets are susceptible to damages and a need to protect the economic value of the assets is needed. The objective of this training is to create insurance sector professionals by imparting strong technical knowledge.

Highlights:

Trainees will have a better grasp of insurance policies and risk analysis, which could make landing a mid-to a high-level management position. This particular module focuses on financial leadership abilities, including an introduction to risk management and behavioral finance principles, as well as how the securities, insurance and banking industries work in the real world. If you want to seek a career in the insurance industry, this course is extremely beneficial since it's a systematic study plan that will take you greater heights in the realm of insurance.

Objectives:

- Participants are trained how to become self-confident, outgoing, helpful, and to imbibe persuasion abilities.
- To mould the participants into professionals.
- To help you find abundant opportunities in the spectrum of insurance.

- To provide excellent exposure to the insurance sector through projects, case studies, and assignments, in addition to academics.
- To provide training regarding types and limits of coverage, insurance company, policy number, name of the insured, and the policy's effective periods.
